## HI983304

## Conductivity Meters for Demineralized Water

- Automatic Temperature Compensation (ATC)
- Water-resistant
- Adjustable setpoint

The HI983304 is specifically designed for use in demineralized and deionized water, as these applications have low conductivity.

When placed at the output of any demineralization system, the visual alarm will be activated once the demineralizing equipment is exhausted. This exclusive feature will ensure maximum system efficiency with minimum investment.

The HI983304 has a built-in LCD display and measures from 0 to 19.99  $\mu S/\text{cm}.$ 

This meter is supplied with an HI7631/2 direct two-pin probe with 2 m (6.6′) cable and a  $\frac{1}{2}$ " thread for flow-thru mounting. This probe is also equipped with a temperature sensor to automatically compensate measurements against temperature changes from 5 to 50°C (41 to 122°F).

When operating in the measurement mode, the HI983304's red LED will alert the user as soon as the reading is 1  $\mu\text{S/cm}$  over the setpoint.

| Range                       | 0.00 to 19.99 μS/cm                                                                                                                                        |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Resolution                  | 0.01 μS/cm                                                                                                                                                 |
| Accuracy<br>(@25°C/77°F)    | ±2% F. S.                                                                                                                                                  |
| Calibration                 | manual, one point, through trimmer                                                                                                                         |
| Temperature<br>Compensation | automatic, 5 to 50°C (41 to 122°F) with β=2.4%/°C                                                                                                          |
| Setpoint                    | 1.00 to 5.00 μS/cm                                                                                                                                         |
| Alarm                       | red LED blinks when measured value differs from the setpoint more than 1.00 $\mu\text{S/cm}$                                                               |
| Probe (included)            | HI7631/2 conductivity probe with 2 m (6.6') cable and 1/2" thread for flow-thru monitoring (included)                                                      |
| Power supply                | 12 VDC adapter (included)                                                                                                                                  |
| Environment                 | 0 to 50°C (32 to 122°F); RH max 100%                                                                                                                       |
| Dimensions                  | 86 x 110 x 43 mm (3.4 x 4.3 x 1.7")                                                                                                                        |
| Weight                      | 215 g (7.6 oz.)                                                                                                                                            |
| Ordering<br>Information     | <b>HI983304-01</b> (115V) and <b>HI983304-02</b> (230V) are supplied with HI7631/2 EC/TDS probe, calibration screwdriver, 12 VDC adapter and instructions. |
