

# EL-USB-ACT

## AC and DC Millivolt Data Logger with Current Clamp Input

### FEATURES

- Energy monitoring mode (to calculate power, cumulative energy and cumulative cost)
- Compatible with a.c. and d.c. current clamps
- a.c. and d.c. millivolt measurement mode

**The EL-USB-ACT (and attached current clamp) should only be used by a competent engineer, and usage must comply with all relevant Local & International Health & Safety Regulations & Guidelines.**

This standalone data logger measures and stores up to 127,000 a.c. or d.c. current readings. This logger must be used with an appropriate current clamp to take readings over a 0 to 1000 amp d.c. measurement range (0 to 723 amps for a.c.). In 'energy monitoring' mode, this data is converted into power, energy (using a user defined voltage value) and cost (using a user supplied energy unit cost). The millivolt measurement mode allows for direct measurement of voltage, up to 1V d.c. (707mV a.c.).

The user can easily set up the logger and view downloaded data by plugging the data logger into a PC's USB port and using the supplied software. The software has provision for a clamp scaling factor (the clamp input-output ratio of amps to millivolts). Stored data can then be graphed, printed and exported to other applications. The high contrast LCD can show a variety of current, power, energy and cost information. At the touch of a button, the user can cycle between the most recent, maximum and minimum measurement values. The data logger is fitted with 2 replaceable AA batteries.

Ensure the connector(s) from your current clamp are pushed fully home into the 4mm sockets of the EL-USB-ACT. Note: some designs of 4mm plugs require a noticeably higher force to be applied during the last 5-10mm of travel during insertion.

Also be aware that it is normal for the logger to show a small spike in the reading when either connecting or disconnecting to the current clamp, although this should decay to close to zero after a few seconds. You may wish to make use of either the delayed start, or push to start modes in the software – if you want to avoid this effect appearing in your logged data.

### ACCESSORIES

|                   |                                     |
|-------------------|-------------------------------------|
| <b>BAT 1V5 AA</b> | Replacement battery<br>(2 required) |
|-------------------|-------------------------------------|

### INCLUDED IN THE BOX

|                       |                          |
|-----------------------|--------------------------|
| <b>x2 BAT 1V5 AA</b>  | Battery - Inside Product |
| <b>CABLE USB A-MF</b> | USB cable                |

## AC and DC Millivolt Data Logger with Current Clamp Input

| Specifications                            | Minimum   | Typical | Maximum    | Unit        |
|---|-----------|---------|------------|-------------|
| Measurement range (a.c.)                  | 0         |         | 707        | mV a.c. RMS |
| Equivalent clamp measurement range (a.c.) | 0         |         | 723        | A a.c.      |
| Accuracy (a.c.)                           |           | 5       |            | %           |
| Frequency                                 |           |         | 500        | Hz          |
| Measurement range (d.c.)                  | -1000     |         | 1000       | mV d.c.     |
| Equivalent clamp measurement range (d.c.) | 0         |         | 1000       | A d.c.      |
| Accuracy (d.c.)                           |           | 2       |            | %           |
| Measurement resolution                    |           | 1       |            | uV          |
| Equivalent clamp measurement resolution*  |           | 250     |            | mA          |
| Display resolution*                       | 1         |         |            | mV          |
| Logging rate (Current measurement)        | Every 1s  |         | Every 12hr | -           |
| Logging rate (Energy measurement)         | Every 1s  |         | Every 10s  | -           |
| Operating temperature range               | -10 (-31) |         | +50 (176)  | °C (°F)     |
| Battery life**                            |           | 4       |            | Months      |

\* Display resolution will change, depending on the number of digits in use. The display will auto range to make the best use of available space

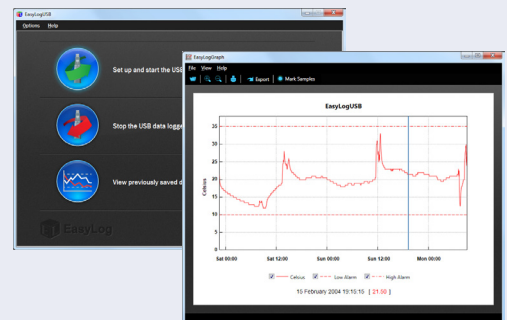

\*\* Depending on sample rate, ambient temperature and use of LCD (See page 3 for more details)

### EL-WIN-USB (CONTROL SOFTWARE)

Lascar’s EasyLog control software is available as a free download from [www.easylogusb.com](http://www.easylogusb.com). Easy to install and use, the control software is compatible with 32-bit and 64-bit versions of Windows 7, 8 and 10. The software is used to set up the logger, download, graph and annotate data or export in Excel, PDF and jpeg formats.

The software allows the following parameters to be configured:

- Logger name
- Measurement mode (current, energy, power or voltage)
- Logging rate (user selectable between 2 seconds and 1 hour).  
Energy monitoring is limited to 1s and 10s average.
- Signal type (a.c. or d.c.)
- Supply voltage (energy monitoring only)
- Cost per kWh (energy monitoring only)
- High and low alarm levels
- Scaling factor (when using a current clamp only, to accommodate multiple turns through the clamp or different mV/A ratios)
- Immediate, delayed and push-to-start logging

Download the latest version of the software free of charge from [www.easylogusb.com](http://www.easylogusb.com)

# EL-USB-ACT

## AC and DC Millivolt Data Logger with Current Clamp Input

### DIMENSIONS

All dimensions in mm (inches)

### BATTERIES

The EL-USB-ACT uses 2 x 1.5V AA batteries. Battery life will vary depending on the usage profile of the data logger. For example:

| Sample rate | LCD mode                              | Expected battery life |
|-------------|---------------------------------------|-----------------------|
| 1 second    | On at all times                       | 2 weeks               |
| 1 minute    | On for 30 seconds after battery press | 4 months              |
| 10 minutes  | On for 30 seconds after battery press | 1 year                |

To achieve the best possible battery life choose the lowest sample rate suitable for your application and where acceptable choose for the LCD to turn off after 30 seconds. It is also advisable to use the best quality batteries available. We recommend that you replace the batteries every month, or prior to logging critical data.

The EL-USB-ACT does not lose its stored readings when the batteries are discharged or replaced; however, the data logging process will be stopped and cannot be re-started until the batteries have been replaced and the logged data has been downloaded to a PC. When replacing batteries, ensure the EL-USB-ACT is not connected to the PC.

Note: Leaving the EL-USB-ACT plugged into the USB port for longer than necessary will cause some of the battery capacity to be lost.

### WARNING

Handle batteries carefully, observe warnings on battery casing. Dispose of in accordance with local regulations.

### DISPLAY AND STATUS FUNCTIONS

The EL-USB-ACT features a high contrast LCD. The LCD shows logged values using seven segment numbers and corresponding symbols. The LCD also shows information regarding the logger status.

The EL-USB-ACT has three different modes:

- In 'current mode', three different functions are available on the display – most recent logged current, maximum logged current and minimum logged current.
- In 'millivolt mode', three different functions are available on the display – most recent logged voltage, maximum logged voltage and minimum logged voltage
- In 'energy monitoring mode', five different functions are available on the display – most recent logged power, maximum logged power, minimum logged power, cumulative energy consumption and cumulative cost (only available if a cost per kWh is entered in the software during setup).

The push button is used to cycle through the functions in each mode.

### LCD INDICATION

All Modes:

| Display              | Logger Status | Explanation   |
|----------------------|---------------|---|
| <b>DELAYED</b>       | Delayed Start | This is shown when the logger is set to start at a specific data and time*  |
| <b>PUSH TO START</b> | Push to Start | This is shown when the logger is setup for "Push to start" logging  |
| <b>LOGGING</b>       | Logging       | This is shown when the logger is running in "LCD off" mode, and the button is pressed. The display clears again after three seconds |
| <b>HI ALARM</b>      | High alarm    | This is shown when the input goes above a user specified value **   |
| <b>LO ALARM</b>      | Low alarm     | This is shown when the input goes below a user specified value **   |
| <b>STOP</b>          | Stopped       | If the logger has not been set to log and the button is pressed, 'Stop' is displayed for three seconds                              |

\* If the logger is set to "LCD off" or "LCD on for 30 seconds" mode, then this will only be shown after the button is pressed. Otherwise the display will remain blank.

\*\* Not available in 'energy monitoring' mode.
